SUMMARY

Full-stack engineer with 4+ years building and operating production APIs, web and mobile applications, and AI-enabled systems. Strong background in product-driven system design and cloud-native development on AWS, with end-to-end ownership from design through deployment across LLM systems, microservices, and cloud infrastructure.

EXPERIENCE

Independent Software Engineer

Independent Consulting

September 2025 - Present

- Sole engineer designing, building, and operating a production CRM in daily use by a 5-10 person insurance agency — full ownership from architecture and data modeling through deployment and ongoing operations.
- Built a React/TypeScript frontend optimized for high-volume daily operational use, prioritizing fast data entry, inline validation, and low-friction workflows for frequent administrative tasks, eliminating 5-10 hours/week of manual work.
- Implemented California insurance compliance requirements including role-based access control, audit visibility, and secure document storage and serving through S3, maintaining a full audit trail across all policies and document changes.
- Developed backend services for authentication, core business logic, scheduled background jobs, and automated email notifications that proactively surface policy-related issues, reducing missed renewal follow-ups to near zero.

Software Engineer

Re:Build Manufacturing

April 2022 - August 2025, Los Angeles, CA

- Architected and deployed a multi-tenant LLM platform serving company employees, enabling brand-consistent AI assistants through custom prompting and conversation management, built on AWS Lambda, DynamoDB, and WebSockets with Amazon Bedrock and Open WebUI, and delivered in AWS GovCloud with ITAR compliance.
- Designed and built a microservices ecosystem supporting core enterprise workflows including authentication (OAuth2/SAML), real-time KPI tracking, and domain-specific services handling thousands of daily requests, while publishing polyglot SDKs (Python, .NET, Node.js) via AWS CodeArtifact to achieve ~90% code reuse and reduce new service development time from weeks to days.
- Reverse-engineered and integrated legacy ERP systems (JobBOSS, Deltek) by building fault-tolerant ETL pipelines processing thousands of daily transactions, implementing validation, and reconciliation logic to ensure financial data accuracy and reliability.
- Delivered a Kotlin-based Android demo for Slate Auto used in investor presentations, featuring real-time mapping, Spotify SDK integration, and simulated driver interactions, contributing to \$300M+ in Series B funding.

EDUCATION

Bachelor of Science In Electrical and Computer Engineering; Specialized in Machine Learning and Control

University of California, San Diego • La Jolla, CA • 2021

CERTIFICATIONS

AWS Certified Machine Learning Engineer – Associate

Amazon Web Services • 2025

SKILLS

AWS & Cloud: API Gateway, Lambda, EC2, DynamoDB, S3, Step Functions, EventBridge, Cognito, CloudWatch, CloudFront, ECS, RDS, SQS, SNS, SageMaker, Bedrock, Glue, Kendra, Textract, OpenSearch, CodePipeline, CodeArtifact, CodeBuild

Frameworks & Libraries: React, Zustand, GraphQL, OpenAPI, Tailwind CSS, LangChain, TensorFlow

Databases: DynamoDB, PostgreSQL, Redis, OpenSearch, Supabase

Languages: Python, TypeScript, JavaScript, C#, C, Java, Kotlin, Go, HTML, CSS, SQL, Bash

AI/ML & LLM Tools: Anthropic API (Claude), Amazon Bedrock, OpenAI API, Hugging Face, Claude Code, RAG systems
