SUMMARY

Full-stack engineer with experience building and operating production APIs, web and mobile applications, and AI-enabled systems. Strong background in product-driven system design, cloud-native development on AWS, and end-to-end ownership from design through deployment, including LLM-powered platforms, microservices, and CI/CD pipelines supporting real-world business workflows.

EXPERIENCE

Independent Software Engineer

Independent Consulting

September 2025 – December 2025

- Owned end-to-end design and delivery of a production CRM platform for an insurance agency on AWS, actively used in daily operations.
- Led system architecture and data modeling for customers, policies, claims, documents, and internal workflows, with role-based access control and audit capability.
- Built backend services including authentication, core business logic, scheduled background jobs, and automated email notifications for policy-related issues.
- Developed a React-based frontend optimized for daily operational use, fast data entry, and validation.

Software Engineer

Re:Build Manufacturing

April 2022 – August 2025, Los Angeles, CA

- Architected and deployed a multi-tenant LLM platform serving 50+ member companies, enabling brand-consistent AI assistants through custom prompting and conversation management, built on AWS Lambda, DynamoDB, and WebSockets with Amazon Bedrock and Open WebUI, and delivered in AWS GovCloud with ITAR compliance.
- Designed and built a microservices ecosystem supporting core enterprise workflows including authentication (OAuth2/SAML), real-time KPI tracking, and domain-specific services handling thousands of daily requests, while publishing polyglot SDKs (Python, .NET, Node.js) via AWS CodeArtifact to achieve ~90% code reuse and reduce new service development time from weeks to days.
- Reverse-engineered and integrated legacy ERP systems (JobBOSS, Deltek, QuickBooks) without API documentation by building fault-tolerant ETL pipelines processing 50K+ daily transactions, implementing validation, retry, and reconciliation logic to ensure financial data accuracy and system reliability.
- Delivered a Kotlin-based Android demo application for Slate Auto used in investor presentations, featuring real-time mapping, Spotify SDK integration, and simulated driver interactions, which became the centerpiece of fundraising efforts and contributed to securing \$300M+ in Series B funding.

EDUCATION

Bachelor of Science In Electrical and Computer Engineering; Specialized in Machine Learning and Control

University of California, San Diego • La Jolla, CA • 2021

CERTIFICATIONS

AWS Certified Machine Learning Engineer – Associate

Amazon Web Services • 2025

SKILLS

AWS & Cloud: API Gateway, Lambda, EC2, DynamoDB, S3, Step Functions, EventBridge, Cognito, CloudWatch, CloudFront, ECS, RDS, SQS, SNS, SageMaker, Bedrock, Glue, Kendra, Textract, OpenSearch, CodePipeline, CodeArtifact, CodeBuild

Frameworks & Libraries: React, Zustand, GraphQL, OpenAPI, Tailwind CSS, LangChain, Open WebUI, Pydantic, TensorFlow, PyTorch

Databases: DynamoDB, PostgreSQL, MongoDB, MySQL, Redis, OpenSearch, Supabase

Languages: Python, TypeScript, JavaScript, C#, C, Java, Kotlin, HTML, CSS, SQL

AI/ML & LLM Tools: Claude Code, Anthropic API (Claude), OpenAI API, Hugging Face
